Omschrijving (EN)	ELITE roller chains have a high wear resistance and significantly higher fatigue strength than the standard requires. The right choice for industrial applications: robust and reliable. All ELITE transmission roller chains are highly pre-tensioned and treated with our special additive chain oil eliDUR+, a high-tech initial lubricant. Non-drip eliDUR+ offers not only the added advantage of improved running characteristics, but also provides better corrosion protection. ELITE highlights: - Approx. 40% higher breaking strength is applied to pre-stretch our chains by 10% more than required by standard ISO 606 - Initial lubrication with eliDUR+ ensures extremely high wear resistance - Low run-in elongation - Tensile strength on average 20% higher than required by standard ISO 606 - ELITE pins have a smooth, extra- hard surface for increased wear resistance - Operating temperature range with eliDUR+ standard lubrication: -5 °C to +70 °C - All versions also available in coated form - If required, we can deliver your chains ready-made to the desired length - Special lubricants for low temperatures down to -30 °C or high temperature applications up to +250 °C available on request - On request, iwis delivers chains pair-matched or set-matched and marked
